

News for Lead Teachers and Super Coaches

Observation Instruments and Questions

By now you should all have the instruments and instructions needed to perform this year's observations. Should you have any questions or concerns, please contact Dan Strahl. Questions often arise in the course of observations that require clarification. We will help you in any way so that you may collect the most accurate information.

Feedback is Always Welcome!

We are always glad to hear from site observers concerning situations they may encounter. Any insights, suggestions, or concerns are appreciated. Your feedback helps in many ways. Situations or problems you encounter individually are usually not unique. When you bring those situations or questions to our attention we can pass the solutions and suggestions on to all your associates. Your feedback also helps us continually improve our techniques. As we have said many times before, the goal is to collect the most accurate data possible.

Please take care to follow the instrument collection and completion instructions. All instruments are scanned, so care must be taken to insure proper recording of data. Do not attempt to conduct observations if you have not been trained. If your school has been chosen to participate and you have not been trained please contact your Super Coach.

Newsletter Spotlight

Teachers are often apprehensive about being observed. You may always assure them that no one will be identified and all data is confidential. Last week's attachment to this newsletter may be used at any time.
